

# Proximity Sensors Capacitive PVC Housing Type CA, M18, DC

**TRIPLESIELD™**

**CARLO GAVAZZI**

- Featuring **TRIPLESIELD™** sensor protection
- Adjustable sensing distance 3-8 mm
- Rated operational voltage: 10-40 VDC
- Output: DC 200 mA, NPN or PNP
- Make and break switching function
- LED indication
- High noise immunity
- Flush types
- Cable versions

## Product Description

Capacitive proximity switches with sensing distance of 8 mm flush mounted in metal. 4-wire DC output with both make (NO) and break (NC) switching.

Grey M18 PVC housing with 2 m PVC cable. Ideal for use in level applications in chemical, semi-conductor and food & beverage industries.

## Adjustment Guide

The environments in which capacitive sensors are installed can often be unstable regarding temperature, humidity, object distance and industrial (noise) interference. Because of this, Carlo Gavazzi offers as standard features in all **TRIP-LESHIELD™** capacitive sensors a user-friendly sensitivity adjustment instead of having a fixed sensing range, extended sensing range to accom-

modate mechanically demanding areas, temperature stability to ensure minimum need for adjusting sensitivity if temperature varies and high immunity to electromagnetic interference (EMI).

**Note:**  
Sensors are factory set (default) to maximum rated sensing range.

## Installation Hints

Capacitive sensors have the unique ability to detect almost all materials, either in liquid or solid form. Capacitive sensors can detect metallic as well as non-metallic objects, however, their traditional use is for non-metallic materials such as:

- **Plastic Industry**  
Resins, regrinds or moulded products.

- **Chemical Industry**  
Cleansers, fertilisers, liquid soaps, corrosives and petrochemicals.

- **Wood Industry**  
Saw dust, paper products, door and window frames.

- **Ceramic & Glass Industry**  
Raw material, clay or finished products, bottles.

- **Semi-conductor Industry**

- **Food & Beverage Industry**

- **Packaging Industry**  
Package inspection for level or contents, dry goods, fruits and vegetables, dairy products.

Materials are detected due to their dielectric constant. The bigger the size of an object, the higher the density of material, the better or easier it is to detect the object. Nominal sensing distance for a capacitive sensor is referenced to a grounded metal plate (ST37). For additional information regarding dielectric ratings of materials please refer to Technical Information.
